cut-copy-paste	sanjana.gunna@research.iiit.ac.in	2	Sanjana Gunna	20161110	Sai Praneeth Ch	20161009			Deep High Dynamic Range Imaging of Dynamic Scenes : Standard digital cameras typically take images with under/overexposed regions because of their sensors' limited dynamic range.The most common way to capture high dynamic range (HDR) images using these cameras is to take a series of low dynamic range (LDR) images at different exposures and then merge them into an HDR image but this generates ghosting artifacts which can be reduced while merging. https://drive.google.com/file/d/19edGw00r5fKqQjzYtg_IP9Vud53t2qC/view?usp=sharing		Siddhartha	2 Nov	4:30 P.M. - 4:40 P.
